

Table 1: Task outcome across the full grid (accuracy, %). FEVER-bridge relay runs at tool budget $B=1$ (forced hand-offs); all other cells use calibrated defaults. PDDL reports goal-reached; GAIA runs under an 8k output cap. GPQA-Diamond[†] is the closed-book null anchor (no information asymmetry; predicted arm-invariant); INERT is the tool-use control for BOARD, run on the headline FEVER cells only. **Bold** marks the per-column maximum; no arm–vanilla difference is significant (paired sign tests vs. vanilla pooled over all cells, all $p \geq 0.50$).

Family	Arm	Relay (temporal asymmetry)				Hub (spatial asymmetry)	
		FEVER-br.	PDDL	GPQA-D [†]	GAIA	FEVER-br.	FanOutQA
Context	VANILLA	66.7	52.2	90.0	17.6	66.7	28.8
	FULL	64.6	52.2	94.0	23.5	68.8	30.0
Protocol	SOP	70.8	52.2	84.0	17.6	68.8	27.5
	DOWN	64.6	47.8	88.0	17.6	66.7	27.5
State	BOARD	66.7	47.8	86.0	17.6	70.8	28.8
	EXTRACT	66.7	47.8	86.0	23.5	62.5	33.8
	INERT	68.8	—	—	—	66.7	—
